# Aipri Lifesciences

In India's pharmaceutical sector, doctors and hospitals are often forced to choose between quality and affordability — a trade-off driven by inconsistent standards and unjustified pricing.

At Aipri Lifesciences, we believe that choice should never be necessary.

*Doctors seek products they can trust.*

*Hospitals expect reliability at a fair price*

We launched Aipri with one clear vision: to deliver high-quality sutures — essential tools for surgeons, gynecologists, and orthopedic specialists — without inflating cost.

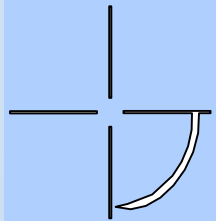

As we expand into a broader pharma portfolio, our guiding principle stays the same:

**“Premium quality should not come at a premium price.”**

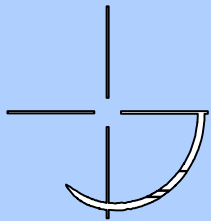

With Aipri, healthcare professionals no longer have to compromise.

# Aicryl

Braided & Coated Polyglactin 910  
Absorbable Surgical Suture U.S.P.

Aicryl – Braided & Coated Polyglactin 910 Suture is a synthetic absorbable sterile surgical suture composed of a copolymer made from 90% glycolide and 10% L-lactide

In-house needle manufacturing provides you the better needles with optimum sharpness which finally delivers smooth riding on tissues during suturing

## Indications

Aicryl is indicated only for use in superficial soft tissue approximation of the skin and mucosa. The suture holds its tensile strength for approximately two to three weeks in tissue and is completely absorbed by hydrolysis within 56 to 70 days.

- Secure Knot holding capacity
- Smooth surface provides easy tissue passage
- Better Tensile Strength provides wound support upto 28 to 32 days

## Best Used For:

- Uterus approximation
- Soft tissue approximation

## Additional Information

<b>Characteristics:</b>	Synthetic Absorbable Surgical Suture
<b>Type :</b>	Braided
<b>Material :</b>	Polyglycolide (90%)- co-lactide(10%) synthetic absorbable braided suture
<b>Coating :</b>	Poly (glycolide-ce-L-lactide) & calcium stearate
<b>Color :</b>	Violet
<b>Support :</b>	28 to 32 days
<b>Absorption :</b>	Absorption takes place through hydrolysis completely in 70 to 90 days
<b>Strength :</b>	75% tensile strength is retained for 14 days and 50% till 21 days.
<b>Sterilization :</b>	EO (Ethylene Oxide)
<b>Shelf Life :</b>	5 Years
<b>Product Characteristics :</b>	Excellent tensile strength, Excellent knot tying, Minimum tissue reaction
<b>Packaging :</b>	In aluminium foil packages with/without needle

# Aicryl Rapid

Braided & Coated Polyglactin 910

(Fast Absorbable)

Absorbable Surgical Suture U.S.P.

**When you are  
in hurry...**

# Aicryl Rapid

Braided & Coated Polyglactin 910  
Absorbable Surgical Suture U.S.P.

Aicryl Rapid – Braided & Coated Polyglactin 910 Suture is a synthetic absorbable sterile surgical suture composed of a low molecular weight copolymer made from 90% glycolide and 10% L-lactide.

In-house needle manufacturing provides you the better needles with optimum sharpness which finally delivers smooth riding on tissues during suturing

## Indications

Aicryl Rapid is indicated only for use in superficial soft tissue approximation of the skin and mucosa, where only short term wound support (7-10 days) is required.

- Secure Knot holding capacity
- Smooth surface provides easy tissue passage

## Best Used For

- Episiotomy repair
- Fast healing tissue repair
- Uterus approximation
- Soft tissue approximation

## Additional Information

<b>Characteristics:</b>	Synthetic Absorbable Surgical Suture
<b>Type :</b>	Braided
<b>Material :</b>	Polyglycolide (90%)- co-lactide(10%) synthetic absorbable braided suture
<b>Coating :</b>	Poly (glycolide-ce-L-lactide) & calcium stearate
<b>Color :</b>	Undyed
<b>Support :</b>	7 to 10 days
<b>Absorption :</b>	Absorption takes place through hydrolysis completely in 40 to 45 days
<b>Strength :</b>	75% tensile strength is retained for 3 days and 50% till 5 days.
<b>Sterilization :</b>	EO (Ethylene Oxide)
<b>Shelf Life :</b>	3 Years
<b>Product Characteristics :</b>	Excellent tensile strength, Excellent knot tying, Minimum tissue reaction
<b>Packaging :</b>	In aluminium foil packages with/without needle

# Aicryl PDS

Monofilament Polydioxanone  
Absorbable Surgical Suture (Synthetic)

- ✓ Where delayed would support required!!!
- ✓ Surface is as smooth as tissue
- ✓ No drag during suture

# Aicryl PDS

Monofilament Polydioxanone  
Absorbable Surgical Suture (Synthetic)

Aicryl PDS – Monofilament Polydioxanone Suture is prepared from the polyester, poly (p-dioxanone).

In-house needle manufacturing provides you the better needles with optimum sharpness which finally delivers smooth riding on tissues during suturing

## Indications

Two important characteristics describe the in vivo performance of absorbable sutures first tensile strength retention and second the absorption rate (loss of mass). Aicryl PDS synthetic absorbable suture has been formulated to minimize the variability of these characteristics and to provide wound support through an extended healing period.

- Where Delayed Wound Support required
- Surface as smooth as tissues; provides no tissue drag during suturing

## Best Used For

- Geriatric Surgeries
- Surgeries on Obese Patient
- Surgeries on Diabetic Patient
- Oncology Patients
- Surgeries on Patients have delayed healing strength

## Additional Information

<b>Characteristics:</b>	Synthetic Absorbable Surgical Suture
<b>Type :</b>	Monofilament
<b>Material :</b>	Polyester, poly-p-dioxanone
<b>Coating :</b>	-
<b>Color :</b>	Violet
<b>Support :</b>	35 to 45 days
<b>Absorption :</b>	Absorption takes place through hydrolysis completely in 180 to 210 days
<b>Strength :</b>	50% tensile strength is retained for 30 days
<b>Sterilization :</b>	EO (Ethylene Oxide)
<b>Shelf Life :</b>	3 Years
<b>Product Characteristics :</b>	Excellent tensile strength, Excellent knot tying, Minimum tissue reaction
<b>Packaging :</b>	In aluminium foil packages with/without needle

# Aicryl - o

Braided & Coated Polyglycolic Acid  
Absorbable Surgical Suture U.S.P.

# Aicryl - o

Braided & Coated Polyglycolic Acid  
Absorbable Surgical Suture U.S.P.

Aicryl-o – Braided & Coated Polyglycolic Acid Suture is an absorbable, sterile, synthetic surgical suture, composed of homopolymers of Glycolide (100%). It is also available undyed. It meets all the requirements as per United States Pharmacopeia for Absorbable Surgical suture (Synthetic).

In-house needle manufacturing provides you the better needles with optimum sharpness which finally delivers smooth riding on tissues during suturing

## Indications

Aicryl-o is indicated for use in general soft tissue approximation and/or ligation, including use in ophthalmic procedures, but not for use in cardiovascular or neurological tissues.

- Smooth Surface provides no tissue trauma
- Secure Knot holding capacity
- Best suture for critical wound support
- Provides Best tissue support even after smaller diameter
- Hydrolytic absorption ensures no tissue reaction

## Additional Information

<b>Characteristics:</b>	Synthetic Absorbable Surgical Suture
<b>Type :</b>	Braided
<b>Material :</b>	100% Polyglycolic Acid synthetic absorbable braided suture
<b>Coating :</b>	Polycaprolactone & calcium stearate
<b>Color :</b>	Violet
<b>Support :</b>	28 to 30 days
<b>Absorption :</b>	Absorption takes place through hydrolysis completely in 70 to 90 days
<b>Strength :</b>	75% tensile strength is retained for 14 days and 50% till 21 days.
<b>Sterilization :</b>	EO (Ethylene Oxide)
<b>Shelf Life :</b>	5 Years
<b>Product Characteristics :</b>	Excellent tensile strength, Excellent knot tying, Minimum tissue reaction
<b>Packaging :</b>	In aluminium foil packages with/without needle

# Monopril

Monofilament Polyglecaprone 25  
Absorbable Surgical Suture (Synthetic)

**Beyond Healing...**

# Monopril

Monofilament Polyglecaprone 25 Absorbable Surgical Suture (Synthetic)

Monopril is a monofilament synthetic absorbable surgical suture prepared from a copolymer of glycolide and epsilon-caprolactone. Monofilament Polyglecaprone 25 suture copolymer has been found to be non antigenic, non pyrogenic and elicits only a slight tissue reaction during absorption.

In-house needle manufacturing provides you the better needles with optimum sharpness which finally delivers smooth riding on tissues during suturing.

## Indications

Poliglecaprone 25 sutures are indicated for use in general soft tissue approximation and/or ligation, but not for use in cardiovascular or neurological tissues, microsurgery or ophthalmic surgery.

## Ultimate Suture For

- Female's skin approximation
- Subcutaneous approximation

## Best Used By

Plastic Surgeons; Gynaecologists; Tricologists; General Surgeon;  
Orthopaedics

## Additional Information

<b>Characteristics:</b>	Synthetic Absorbable Surgical Suture
<b>Type :</b>	Monofilament
<b>Material :</b>	75% poly (glycolide) – 25% co-caprolactone synthetic absorbable suture
<b>Color :</b>	Violet
<b>Support :</b>	21 to 28 days
<b>Absorption :</b>	Absorption takes place through hydrolysis completely in 90 - 120 days
<b>Strength :</b>	50% tensile strength is retained for 14 days
<b>Sterilization :</b>	EO (Ethylene Oxide)
<b>Shelf Life :</b>	3 Years
<b>Product Characteristics :</b>	Excellent tensile strength, Excellent knot tying, Minimum tissue reaction
<b>Packaging :</b>	In aluminium foil packages with/without needle

# Aiprilene

Monofilament Polypropylene

Non Absorbable Surgical Suture U.S.P.

# Aiprilene

Monofilament Polypropylene Non Absorbable Surgical Suture U.S.P.

Aiprilene – Monofilament Polypropylene Suture is a non absorbable sterile surgical suture composed of an isotactic crystalline stereoisomer of polypropylene, a synthetic linear polyolefin. The suture is pigmented blue to enhance visibility.

In-house needle manufacturing provides you the better needles with optimum sharpness which finally delivers smooth riding on tissues during suturing.

## Indications

Monofilament Polypropylene Suture is indicated for use in general soft tissue approximation and/or ligation, including use in cardiovascular, ophthalmic and neurological procedures.

- Smooth Surface results minimal tissue trauma
- Being a monofilament with smooth surface never support bacterial growth followed by capillary action
- Uniform elasticity supports small movements results cosmetic effect
- Ultra smooth surface results negligible pain
- Blue pigmentation enhances visibility

## Ultimate Suture For

- Skin Closure
- Hard Tissues approximation
- Ligament Repair
- Mesh Fixation

# Aipribond

Braided & Coated Polyester

Non Absorbable Surgical suture U.S.P.

**The power of right choice**

# Aipribond

Braided & Coated Polyester Non Absorbable Surgical suture U.S.P.

Aipribond – Braided & Coated Polyester Suture is a non absorbable, braided, sterile, surgical suture composed of Poly (ethylene terephthalate). It is prepared from fibres of high molecular weight, long-chain, linear polyesters having recurrent aromatic rings as an integral component. Braided Polyester Sutures are braided for optimal handling properties and for good visibility in the surgical field.

In-house needle manufacturing provides you the better needles with optimum sharpness which finally delivers smooth riding on tissues during suturing.

## Indications

Aipribond is indicated for use in general soft tissue approximation and/or ligation, including use in cardiovascular, ophthalmic and neurological procedures.

- High Molecular weight , Long Chain, Linear Polyester's fibers results in ultra strong suture
- Smooth Surface results easy passage through toughest tissues
- Ultra high strength offers extra support required by tissues
- Aipribond – a choice of Leading Orthopaedic Surgeons

## Additional Information

<b>Characteristics:</b>	Non Absorbable Surgical Suture
<b>Type :</b>	Braided
<b>Material :</b>	Polyester
<b>Color :</b>	Green
<b>Absorption :</b>	Non - absorbable
<b>Sterilization :</b>	EO (Ethylene Oxide)
<b>Shelf Life :</b>	5 Years
<b>Product Characteristics :</b>	Excellent tensile strength, Excellent knot tying, Minimum tissue reaction
<b>Packaging :</b>	In aluminium foil packages with/without needle

# Aithilon

Monofilament Polyamide

Non Absorbable Surgical Suture U.S.P.

# Aithilon

Monofilament Polyamide Non Absorbable Surgical Suture U.S.P.

Aithilon – Monofilament Polyamide (Nylon) is a non absorbable sterile surgical suture, composed of the long-chain aliphatic homo polymers Nylon 6 and Nylon 6,6. Aithilon monofilament Polyamide Sutures are dyed black or blue to enhance visibility in tissue.

In-house needle manufacturing provides you the better needles with optimum sharpness which finally delivers smooth riding on tissues during suturing.

## Indications

Monofilament Polyamide Suture is indicated for use in general soft tissue approximation and/or ligation, including use in cardiovascular, ophthalmic and neurological procedures.

The best material for skin approximation

- Being a monofilament with smooth surface never support bacterial growth followed by capillary action
- Uniform elasticity supports small movements results cosmetic effect
- Ultra smooth surface results negligible pain

## Ultimate sutures for

- Skin Closure
- Hard Tissues approximation
- Casualty stitching

## Additional Information

<b>Characteristics:</b>	Non Absorbable Surgical Suture
<b>Type :</b>	Monofilament
<b>Material :</b>	Polyamide (Nylon)
<b>Color :</b>	Black
<b>Absorption :</b>	Non - absorbable
<b>Sterilization :</b>	EO (Ethylene Oxide)
<b>Shelf Life :</b>	5 Years
<b>Product Characteristics :</b>	Excellent tensile strength, Excellent knot tying, Minimum tissue reaction
<b>Packaging :</b>	In aluminium foil packages with/without needle

# Prisil

Black Braided Silk

Non Absorbable Surgical Suture U.S.P.

# Prisil

Black Braided Silk Non Absorbable Surgical Suture U.S.P.

Prisil – Black Braided Silk Suture is a non absorbable, sterile, surgical suture composed of an organic protein called fibroin. This protein is derived from the domesticated species Bombyx mori (B. Mori) of the family Bombycidae.

Prisil sutures are processed to remove the natural waxes and gums. Prisil suture is dyed black and coated with a special wax mixture. Prisil Black Braided Silk is also available in its natural color. Prisil Virgin silk is available in which the sericin gum is not removed and serves to hold the filaments together.

In-house needle manufacturing provides you the better needles with optimum sharpness which finally delivers smooth riding on tissues during suturing.

## Indications

Black Braided Silk Suture is indicated for use in general soft tissue approximation and/or ligation, including use in cardiovascular, ophthalmic and neurological procedures.

- Highest purified protein from Species B. Mori results no tissue reaction
- Beeswax coated ultra smooth surface decrease suturing timing followed by no tissue trauma
- Unmatched Knot strength provides satisfaction to user
- USP approved dye increases visibility followed by no reaction

## Additional Information

<b>Characteristics:</b>	Non Absorbable Surgical Suture
<b>Type :</b>	Braided
<b>Material :</b>	Braided Silk
<b>Color :</b>	Black
<b>Absorption :</b>	Non - absorbable
<b>Sterilization :</b>	EO (Ethylene Oxide)
<b>Shelf Life :</b>	5 Years
<b>Product Characteristics :</b>	Excellent tensile strength, Excellent knot tying, Minimum tissue reaction
<b>Packaging :</b>	In aluminium foil packages with/without needle

# Prigut

Catgut Chromic/Plain  
Absorbable Surgical Suture U.S.P.

# Prigut

Catgut Chromic/Plain Absorbable Surgical Suture U.S.P.

Prigut Catgut Sutures are absorbable, twisted surgical sutures made from purified collagen derived from the submucosal layer of healthy bovine intestines. They offer dependable wound support and are ideal for a variety of soft tissue approximation and ligation procedures.

- Prigut Catgut Plain is a fast-absorbing suture designed for short-term wound support, ensuring minimal tissue reaction. It features a uniform smooth surface and sharp needle attachments for efficient suturing with reduced tissue drag.
- Prigut Catgut Chromic, treated with chromic salts, offers delayed absorption and improved tensile strength, making it suitable for internal soft tissue approximation where longer support is needed.

## Indications

- Plain Catgut is ideal for external skin closure and other procedures requiring short-term support.
- Chromic Catgut is indicated for internal use in general soft tissue approximation and ligation, including gynecological, urological, and general surgical procedures, but not for use in cardiovascular or neurological tissues.

## Additional Information

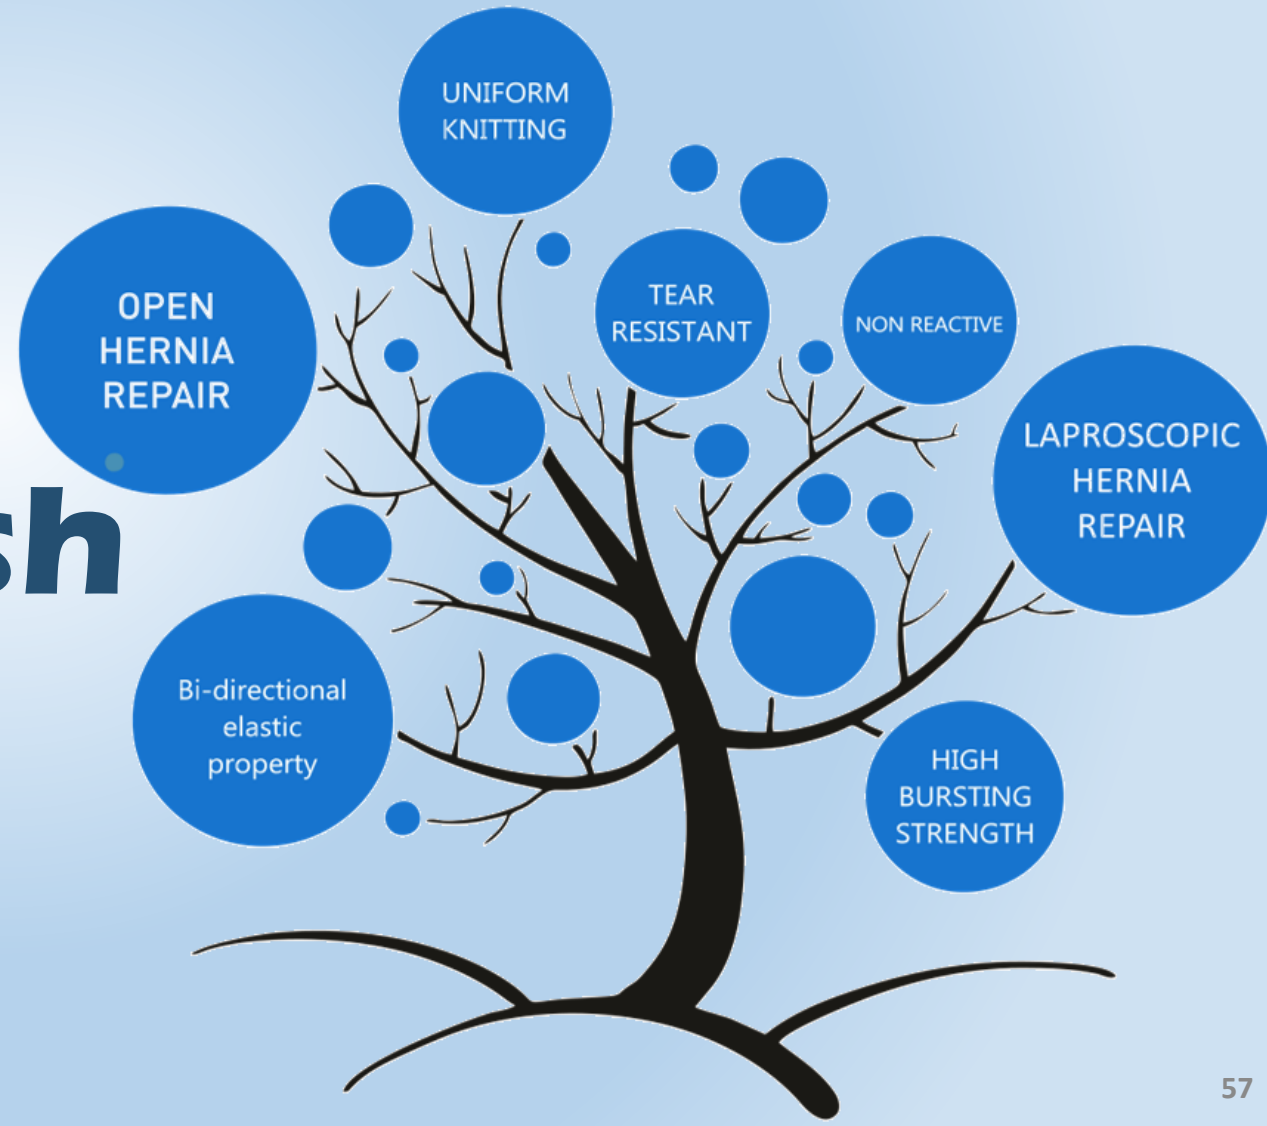

<b>Characteristics:</b>	Absorbable Surgical Suture
<b>Type :</b>	Twisted
<b>Material :</b>	Catgut (Plain/Chromic)
<b>Color :</b>	Beige (Plain) / Brown (Chromic)
<b>Absorption :</b>	Enzymatic reaction:- Plain: 60 to 70 days- Chromic: 90 to 120 days
<b>Strength:</b>	Plain: Retains tensile strength for 7 to 10 days- Chromic: 14 to 21 days
<b>Sterilization :</b>	EO (Ethylene Oxide)
<b>Shelf Life :</b>	5 Years
<b>Product Characteristics :</b>	Excellent tensile strength, Excellent knot tying, Minimum tissue reaction
<b>Packaging :</b>	In aluminium foil packages with/without needle

# Aiprilene Mesh

Monofilament Polypropylene Mesh (Undyed)  
Non Absorbable Sterile Surgical Mesh

# Aiprilene Mesh

Monofilament Polypropylene Mesh (Undyed) Non Absorbable Sterile Surgical Mesh

Polypropylene Mesh is constructed of knitted filaments of extruded polypropylene identical in composition to that used in Aiprelene Polypropylene Suture. This material, when used as a suture, has been reported to be nonreactive and to retain its strength indefinitely in clinical use.

Polypropylene Mesh is knitted by a process which interlinks each fiber junction and which provides for elasticity in both directions. This construction permits the mesh to be cut into any desired shape or size without unraveling. This bi-directional elastic property allows adaptation to various stresses encountered in the body

In-house mesh manufacturing makes us unique and potential manufacturer. Aiprilene Mesh is our unique product and we are available with any type, any kind of modification.

## Indications of Aiprelene Mesh

Polypropylene Mesh used for the hernia repair and other facial deficiencies that require the addition of a reinforcing or bridging material to obtain the desired surgical result.

- Unilene Mesh Probably the best in kind
- An artificial wall which doesn't feel
- Latest technology with perfection provides ultra smooth surface results optimum healing
- Knitting is as per requirement of tissues results no discomfort after surgery.

## Additional Information

<b>Characteristics:</b>	Non - Absorbable
<b>Type :</b>	Knitted filaments of extruded polypropylene
<b>Material :</b>	Polypropylene
<b>Color :</b>	White (undyed)
<b>Absorption :</b>	Non - absorbable
<b>Sterilization :</b>	EO (Ethylene Oxide)
<b>Shelf Life :</b>	5 Years
<b>Product Characteristics :</b>	Light weight construction because of which less foreign mass in the body & flexible scar tissue. Macro porous for high visibility and colonization

# **Aipriseal**

Sterile Bonewax

# Aipriseal

Sterile bonewax

Bone Wax is a mixture of beeswax, paraffin, and isopropyl palmitate, a wax-softening agent. It is opaque and has a waxy odor. It's indicated for use in control of bleeding from bone surfaces during surgical procedures.

It achieves local haemeostasis of bone by acting as a mechanical (tamponade) barrier. It does not act biochemically and is non absorb-able. It is available sterile in individual foil envelopes, each containing 2.5 g and packed in an individually sealed over wraps. Surgical wax is sterilized by Gamma radiation..

Packets should be opened just prior to use to minimize the possibility of contamination and excessive drying and should be used immediately. The Surgical Wax should not be re-sterilized or subjected to excessive heat.

## Additional Information

<b>Material :</b>	Beeswax, Paraffin & Isopropyl Palmitate
<b>Color :</b>	Opaque
<b>Absorption :</b>	Minimally Resorbable
<b>Sterilization :</b>	Gamma Radiation
<b>Shelf Life :</b>	5 Years
<b>Product Characteristics :</b>	Helps local haemostasis by functioning like a mechanical barrier & is biochemically inert
<b>Packaging:</b>	In aluminum foil packages

At Aipri Lifesciences, we understand what truly matters in the operating room and beyond consistency, safety, and cost-effectiveness.

Our sutures are manufactured to meet stringent standards, giving doctors the performance they expect and hospitals the value they need, without compromise.

## The Aipri Difference

*Doctors need trust.*

*Hospitals need value.*

**We deliver both.**
